### WORK EXPERIENCE:

#### Geico, Remote

##### Software Engineer II

Jul 2025 – Present

- Led redesign of the iOS Telematics SDK public interface used by GEICO's DriveEasy host app and internal tools, modernizing SDK-host communication with Swift async/await, Combine, and delegate/callback architecture.
- Rebuilt SDK activation and configuration flows during backend platform and Flutter host-app migration, preventing duplicate activation calls, improving error handling, and reducing risk of accidental user deactivation across DriveEasy policies.
- Extended iOS-led SDK changed to Android for cross-platform parity, validating behavior through local builds, device testing, simulation scenarios, and release artifacts.
- Streamlined monthly SDK and internal app released by reducing QA cycle time from 1 week to 3 days, coordinating TestFlight builds and catching release issues before production.
- Refactored trip validation and core SDK modules used by 2.3M+ drivers, reducing crashes from threading/async issues and improving reliability; ensured cross-platform parity with Android and raised automated unit test coverage across all checked-in code.
- Reduced 10k+ monthly geocoding failures to near zero by implementing retry logic, coordinate validation, and timeout handling; improved trip start/end accuracy, eliminated null UI states, and ensured backend data integrity with full positive/negative test coverage.

#### Geico, Remote

##### Software Engineer I

May 2024 – Jul 2025

- Cut distracted-driving false positives by 90%, eliminating weekly customer complaints and improving fairness of driver scoring logic.
- Upgraded iOS SDK trip pipeline from 1Hz to 9Hz to align with data science models, rolling out higher-fidelity trip data to 100% of users for improved scoring and analytics accuracy.
- Built customer-facing Trips and Vehicles pages from scratch for a new commercial telematics platform, implementing Flutter UI, map updates, vehicle markers, route rendering, and trip status experiences.
- Improved commercial fleet map refresh from 10s to 5s using Riverpod and custom services, giving fleet managers a more accurate real-time view of vehicle location, speed, and trip activity.
- Partnered with design to translate Figma prototypes into reusable mobile components for vehicle and trip detail pages, supporting both current platform delivery and upcoming mobile UI work.

### EDUCATION:

**Stevens Institute of Technology** – M.S. Computer Science

May 2026

**Montclair State University** – B.S. Computer Science.

Dec 2023

### SKILLS:

- **Languages & Frameworks:** Swift, SwiftUI, Flutter, Dart, Python, TypeScript, React, Next.js, JavaScript, Java
- **Databases & Cloud:** Firebase, Azure, Cosmo DB, MongoDB, MS SQL Server
- **Developer Tools:** Git, Docker, Azure DevOps, Xcode, TestFlight
